

ClipMind AI

AI Video Summarization & Key
Moment Detection Platform

MILESTONE 1

Project Overview

● Project Overview

ClipMind AI is an intelligent platform designed to simplify long-form video consumption using Artificial Intelligence. It converts lengthy videos into structured transcripts, concise summaries, and important highlights, helping users understand content more efficiently.

● Objectives

- Reduce the time required to consume long-form videos.
- Automatically generate transcripts and AI-powered summaries.
- Improve accessibility through searchable and structured content.

FEATURES

Video Upload

Users can securely upload videos in supported formats, which are stored and prepared for AI-based processing.

Transcript Generation

The platform converts speech into accurate, searchable transcripts using advanced speech-to-text technology.

AI Summarization

AI automatically generates concise and meaningful summaries, enabling users to quickly understand long-form content.

Key Moment Detection and Analytics

Important highlights and timestamps are identified automatically, allowing users to navigate directly to key sections. Interactive analytics provide insights into video performance, user engagement, and AI processing statistics.

User Registration Authentication

Authentication Module

A secure authentication system was implemented to provide controlled access based on different user roles. Each role is assigned permissions according to its responsibilities within the platform.

Implemented Features

- User Registration
- Secure Login
- Role Selection (Learner, Educator, Creator, Researcher)
- JWT-based Authentication

Dashboard Design

Dashboard Overview

The dashboard serves as the central workspace where users can upload videos, generate transcripts, create AI summaries, and monitor recent activities through an intuitive interface.

Highlights

- Quick access to all modules.
- Recent uploads and processing status.
 - Personalized workspace.
 - Modern and responsive UI.

Video Upload & Transcript

The platform allows users to upload video files securely and automatically initiate AI-based processing for transcript generation.

Features

- Drag-and-drop video upload.
- Support for multiple video formats.
- AI-generated searchable transcripts.
- Export and copy transcript functionality.

AI Summary & Analytics

ClipMind AI transforms transcripts into concise summaries while providing visual analytics to measure user engagement and platform performance.

Features

- AI-generated structured summaries.
 - Key insights extraction.
- Performance metrics dashboard.
- Interactive analytics and reports.

Milestone 1 Summary

● Foundation Established

Successfully designed the project architecture, responsive user interface, and secure authentication system, providing a strong foundation for future AI integration.

● Core Modules Developed

Implemented the landing page, dashboard, video upload interface, transcript viewer, AI summary interface, and analytics dashboard as part of the initial platform.

● Next Phase

Implemented the landing page, dashboard, video upload interface, transcript viewer, AI summary interface, and analytics dashboard as part of the initial platform.

Next Milestone Summary

The next phase of ClipMind AI focuses on integrating advanced AI capabilities to transform the platform into a complete end-to-end video intelligence solution. The upcoming development will emphasize intelligent content processing, improved system performance, and seamless user experience.

● AI Integration

Integrate OpenAI Whisper for speech-to-text conversion and implement AI-powered summarization to generate accurate transcripts and concise video summaries automatically.

● Intelligent Features

Integrate OpenAI Whisper for speech-to-text conversion and implement AI-powered summarization to generate accurate transcripts and concise video summaries automatically.

● Optimization & Deployment

Complete backend API integration, optimize system performance, perform comprehensive testing, and prepare the platform for cloud deployment and final demonstration.

Thank You.

Turning long-form videos into meaningful insights with AI.
